# Chapter 1

## Data Structure Index

### 1.1 Data Structures

Here are the data structures with brief descriptions:

<a href="#">cvector</a> . . . . .	5
-----------------------------------	---

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all files with brief descriptions:

/home/thomas/Drive/tbagrel/dev/c/vector/ <a href="#">cvector.h</a> . . . . .	7
/home/thomas/Drive/tbagrel/dev/c/vector/ <a href="#">main.c</a> . . . . .	35

## Chapter 3

# Data Structure Documentation

### 3.1 cvector Struct Reference

```
#include <cvector.h>
```

#### Data Fields

- [index\\_t \\_size](#)
- [index\\_t \\_space](#)
- [value\\_t \\* \\_vector](#)

#### 3.1.1 Detailed Description

Main struct holding the cvector structure.

Definition at line 198 of file cvector.h.

#### 3.1.2 Field Documentation

##### 3.1.2.1 \_size

[index\\_t](#) \_size

Definition at line 199 of file cvector.h.

### 3.1.2.2 `_space`

`index_t _space`

Definition at line 200 of file `cvector.h`.

### 3.1.2.3 `_vector`

`value_t* _vector`

Definition at line 201 of file `cvector.h`.

The documentation for this struct was generated from the following file:

- `/home/thomas/Drive/tbagrel/dev/c/cvector/cvector.h`

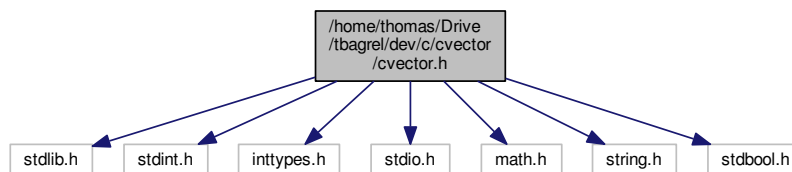

## Chapter 4

# File Documentation

### 4.1 /home/thomas/Drive/tbagrel/dev/c/cvector/cvector.h File Reference

```
#include <stdlib.h>
#include <stdint.h>
#include <inttypes.h>
#include <stdio.h>
#include <math.h>
#include <string.h>
#include <stdbool.h>
```

Include dependency graph for cvector.h:

### Data Structures

- struct `cvector`

### Macros

- `#define _CONCAT(a, b) a ## b`

### 4.1.1 Macro Definition Documentation

#### 4.1.1.1 \_\_cvector\_extend

```
#define __cvector_extend __##CONCAT(CVECTOR_T, __cvector__extend)
```

Definition at line 190 of file [cvector.h](#).

#### 4.1.1.2 `__cvector_setspace`

```
#define __cvector_setspace __##CONCAT(CVECTOR_T, __cvector__setspace)
```

Definition at line 188 of file `cvector.h`.

#### 4.1.1.3 `__cvector_shrink`

```
#define __cvector_shrink __##CONCAT(CVECTOR_T, __cvector__shrink)
```

Definition at line 189 of file `cvector.h`.

#### 4.1.1.4 `_CONCAT`

```
#define _CONCAT(  
    a,  
    b ) a ## b
```

Definition at line 13 of file `cvector.h`.

#### 4.1.1.5 `ADDSPACE_FACTOR`

```
#define ADDSPACE_FACTOR 2.0
```

Space factor used when a `cvector` becomes too short to hold additional values. It means that the new `cvector` will have a space for `ADDSPACE_FACTOR`

- the old space.

Definition at line 73 of file `cvector.h`.

#### 4.1.1.6 `CONCAT`

```
#define CONCAT(  
    a,  
    b ) _CONCAT(a, b)
```

Definition at line 14 of file `cvector.h`.

#### 4.1.1.7 cvector

```
#define cvector CONCAT(CVECTOR_T, _cvector)
```

Definition at line 151 of file cvector.h.

#### 4.1.1.8 cvector\_add

```
#define cvector_add CONCAT(CVECTOR_T, _cvector__add)
```

Definition at line 159 of file cvector.h.

#### 4.1.1.9 cvector\_addi

```
#define cvector_addi CONCAT(CVECTOR_T, _cvector__addi)
```

Definition at line 160 of file cvector.h.

#### 4.1.1.10 cvector\_addspace

```
#define cvector_addspace CONCAT(CVECTOR_T, _cvector__addspace)
```

Definition at line 187 of file cvector.h.

#### 4.1.1.11 cvector\_appendto

```
#define cvector_appendto CONCAT(CVECTOR_T, _cvector__appendto)
```

Definition at line 170 of file cvector.h.

#### 4.1.1.12 cvector\_clear

```
#define cvector_clear CONCAT(CVECTOR_T, _cvector__clear)
```

Definition at line 165 of file cvector.h.

#### 4.1.1.13 cvector\_concat

```
#define cvector_concat CONCAT(CVECTOR_T, _cvector__concat)
```

Definition at line 171 of file cvector.h.

#### 4.1.1.14 cvector\_drop

```
#define cvector_drop CONCAT(CVECTOR_T, _cvector__drop)
```

Definition at line 164 of file cvector.h.

#### 4.1.1.15 cvector\_equal

```
#define cvector_equal CONCAT(CVECTOR_T, _cvector__equal)
```

Definition at line 174 of file cvector.h.

#### 4.1.1.16 cvector\_equal\_func

```
#define cvector_equal_func CONCAT(CVECTOR_T, _cvector__equal_func)
```

Definition at line 175 of file cvector.h.

#### 4.1.1.17 cvector\_free

```
#define cvector_free CONCAT(CVECTOR_T, _cvector__free)
```

Definition at line 156 of file cvector.h.

#### 4.1.1.18 cvector\_free\_func

```
#define cvector_free_func CONCAT(CVECTOR_T, _cvector__free_value)
```

Definition at line 158 of file cvector.h.

#### 4.1.1.19 cvector\_get

```
#define cvector_get CONCAT(CVECTOR_T, _cvector__get)
```

Definition at line 166 of file cvector.h.

#### 4.1.1.20 cvector\_getsize

```
#define cvector_getsize CONCAT(CVECTOR_T, _cvector__getsize)
```

Definition at line 157 of file cvector.h.

#### 4.1.1.21 cvector\_hash

```
#define cvector_hash CONCAT(CVECTOR_T, _cvector__hash)
```

Definition at line 173 of file cvector.h.

#### 4.1.1.22 cvector\_in

```
#define cvector_in CONCAT(CVECTOR_T, _cvector__in)
```

Definition at line 182 of file cvector.h.

#### 4.1.1.23 cvector\_in\_func

```
#define cvector_in_func CONCAT(CVECTOR_T, _cvector__in_func)
```

Definition at line 183 of file cvector.h.

#### 4.1.1.24 cvector\_indexof

```
#define cvector_indexof CONCAT(CVECTOR_T, _cvector__indexof)
```

Definition at line 180 of file cvector.h.

#### 4.1.1.25 cvector\_indexof\_func

```
#define cvector_indexof_func CONCAT(CVECTOR_T, _cvector__indexof_func)
```

Definition at line 181 of file cvector.h.

#### 4.1.1.26 cvector\_insert

```
#define cvector_insert CONCAT(CVECTOR_T, _cvector__insert)
```

Definition at line 161 of file cvector.h.

#### 4.1.1.27 cvector\_new

```
#define cvector_new CONCAT(CVECTOR_T, _cvector__new)
```

Definition at line 152 of file cvector.h.

#### 4.1.1.28 cvector\_new\_copy

```
#define cvector_new_copy CONCAT(CVECTOR_T, _cvector__new_copy)
```

Definition at line 154 of file cvector.h.

#### 4.1.1.29 cvector\_new\_copy\_space

```
#define cvector_new_copy_space CONCAT(CVECTOR_T, _cvector__new_copy_space)
```

Definition at line 155 of file cvector.h.

#### 4.1.1.30 cvector\_new\_space

```
#define cvector_new_space CONCAT(CVECTOR_T, _cvector__new_space)
```

Definition at line 153 of file cvector.h.

#### 4.1.1.31 cvector\_readjust

```
#define cvector_readjust CONCAT(CVECTOR_T, _cvector__readjust)
```

Definition at line 186 of file cvector.h.

#### 4.1.1.32 cvector\_remove

```
#define cvector_remove CONCAT(CVECTOR_T, _cvector__remove)
```

Definition at line 162 of file cvector.h.

#### 4.1.1.33 cvector\_removei

```
#define cvector_removei CONCAT(CVECTOR_T, _cvector__removei)
```

Definition at line 163 of file cvector.h.

#### 4.1.1.34 cvector\_replace

```
#define cvector_replace CONCAT(CVECTOR_T, _cvector__replace)
```

Definition at line 177 of file cvector.h.

#### 4.1.1.35 cvector\_replace\_func

```
#define cvector_replace_func CONCAT(CVECTOR_T, _cvector__replace_func)
```

Definition at line 178 of file cvector.h.

#### 4.1.1.36 cvector\_reversed

```
#define cvector_reversed CONCAT(CVECTOR_T, _cvector__reversed)
```

Definition at line 172 of file cvector.h.

#### 4.1.1.37 cvector\_safeget

```
#define cvector_safeget CONCAT(CVECTOR_T, _cvector__safeget)
```

Definition at line 167 of file cvector.h.

#### 4.1.1.38 cvector\_safeset

```
#define cvector_safeset CONCAT(CVECTOR_T, _cvector__safeset)
```

Definition at line 169 of file cvector.h.

#### 4.1.1.39 cvector\_set

```
#define cvector_set CONCAT(CVECTOR_T, _cvector__set)
```

Definition at line 168 of file cvector.h.

#### 4.1.1.40 cvector\_slice

```
#define cvector_slice CONCAT(CVECTOR_T, _cvector__slice)
```

Definition at line 184 of file cvector.h.

#### 4.1.1.41 cvector\_slicetoarray

```
#define cvector_slicetoarray CONCAT(CVECTOR_T, _cvector__slicetoarray)
```

Definition at line 185 of file cvector.h.

#### 4.1.1.42 cvector\_sort

```
#define cvector_sort CONCAT(CVECTOR_T, _cvector__sort)
```

Definition at line 179 of file cvector.h.

#### 4.1.1.43 CVECTOR\_T

```
#define CVECTOR_T DEFAULT\_CVECTOR\_T
```

Type of the elements to hold in this instance of the cvector library. BE CAREFUL! The specified type must be a correct identifier, since it will prefix any function of this cvector instance. For example `#define CVECTOR_T int *` should be replaced with `typedef int * pint; #define CVECTOR_T pint`

Definition at line 132 of file cvector.h.

#### 4.1.1.44 cvector\_toarray

```
#define cvector_toarray CONCAT(CVECTOR_T, _cvector__toarray)
```

Definition at line 176 of file cvector.h.

#### 4.1.1.45 DEBUG\_LEVEL

```
#define DEBUG_LEVEL DEFAULT\_DEBUG\_LEVEL
```

Debug level used in debug print. Higher means more messages. Available levels: Error [E]: 0 Warning [W]: 1 Information [I]: 2 Log [L]: 3

Definition at line 47 of file cvector.h.

#### 4.1.1.46 DEFAULT\_CVECTOR\_T

```
#define DEFAULT_CVECTOR_T int
```

Definition at line 15 of file cvector.h.

#### 4.1.1.47 DEFAULT\_DEBUG\_LEVEL

```
#define DEFAULT_DEBUG_LEVEL 2
```

Definition at line 24 of file cvector.h.

#### 4.1.1.48 DEFAULT\_DEFAULT\_VALUE

```
#define DEFAULT_DEFAULT_VALUE 0
```

Definition at line 16 of file cvector.h.

#### 4.1.1.49 DEFAULT\_HASH\_T

```
#define DEFAULT_HASH_T size_t
```

Definition at line 17 of file cvector.h.

#### 4.1.1.50 DEFAULT\_PRINT\_DEBUG\_FUNC

```
#define DEFAULT_PRINT_DEBUG_FUNC default_print_debug
```

Definition at line 18 of file cvector.h.

#### 4.1.1.51 DEFAULT\_VALUE

```
#define DEFAULT_VALUE DEFAULT_DEFAULT_VALUE
```

Default value for the type of this instance of cvector, used when an error occurs and when a function needs to return a value.

Definition at line 140 of file cvector.h.

#### 4.1.1.52 EXTEND\_FACTOR

```
#define EXTEND_FACTOR 2.0
```

Space factor used when a extend operation is triggered. It means that the new space of the cvector will be  $EXTEND\_FACTOR * \text{the current space}$ .

Definition at line 109 of file cvector.h.

#### 4.1.1.53 EXTEND\_THRESHOLD

```
#define EXTEND_THRESHOLD 0.90
```

Threshold from which the cvector will be extended in a readjust operation. It means that if the current size of the cvector is above EXTEND\_THRESHOLD

- its space, it will be extended. Set to above 1 to prevent extend during readjust operations.

Definition at line 101 of file cvector.h.

#### 4.1.1.54 HASH\_T

```
#define HASH_T DEFAULT_HASH_T
```

Definition at line 144 of file cvector.h.

#### 4.1.1.55 INIT\_FACTOR

```
#define INIT_FACTOR 1.25
```

Space factor used when a copy of cvector is created, or a concatenation of two cvectors. It means that the resulting array will have a space for INIT\_FACTOR \* actual size items.

Definition at line 64 of file cvector.h.

#### 4.1.1.56 INIT\_SPACE

```
#define INIT_SPACE 8
```

Space in element units of a fresh created cvector, if no space was specified.

Definition at line 55 of file cvector.h.

#### 4.1.1.57 NOT\_FOUND\_INDEX

```
#define NOT_FOUND_INDEX ((index_t) (-1))
```

Definition at line 27 of file cvector.h.

#### 4.1.1.58 PRINT\_DEBUG

```
#define PRINT_DEBUG(  
    level,  
    message )
```

##### Value:

```
if (PRINT_DEBUG_FUNC != NULL) { \  
    PRINT_DEBUG_FUNC(level, message); \  
} \  
int EXPECT_A_SEMICOLON = 1
```

Definition at line 19 of file cvector.h.

#### 4.1.1.59 PRINT\_DEBUG\_FUNC

```
#define PRINT_DEBUG_FUNC DEFAULT_PRINT_DEBUG_FUNC
```

Print debug function called when some error or log message needs to be printed on the screen or the log. The function signature must be void print\_debug(int level, const char \*message)

Definition at line 118 of file cvector.h.

#### 4.1.1.60 ROUND\_INDEX

```
#define ROUND_INDEX(  
    x ) ((index_t) (lrint(x)))
```

Definition at line 28 of file cvector.h.

#### 4.1.1.61 SHRINK\_FACTOR

```
#define SHRINK_FACTOR 0.5
```

Space factor used when a shrink operation is triggered. It means that the new space of the cvector will be  $SHRINK\_FACTOR * \text{the current space}$ .

Definition at line 91 of file cvector.h.

#### 4.1.1.62 SHRINK\_THRESHOLD

```
#define SHRINK_THRESHOLD 0.5
```

Threshold from which the cvector will be shrunk in a readjust operation. It means that if the current size of the cvector is under `SHRINK_THRESHOLD * its space`, it will be shrunk. Set to under 0 to prevent shrink during readjust operations.

Definition at line 83 of file cvector.h.

### 4.1.2 Typedef Documentation

#### 4.1.2.1 cvector

```
typedef struct cvector cvector
```

Definition at line 193 of file cvector.h.

#### 4.1.2.2 hash\_t

```
typedef HASH_T hash_t
```

Definition at line 148 of file cvector.h.

#### 4.1.2.3 index\_t

```
typedef size_t index_t
```

Definition at line 26 of file cvector.h.

#### 4.1.2.4 value\_t

```
typedef CVECTOR_T value_t
```

Definition at line 147 of file cvector.h.

### 4.1.3 Function Documentation

#### 4.1.3.1 \_\_cvector\_setspace()

```
void __cvector_setspace (  
    cvector * p_cvector,  
    index_t new_space )
```

Sets space of the specified cvector to new\_space

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>new_space</i>	the new space for the specified cvector

Definition at line 974 of file cvector.h.

**4.1.3.2 cvector\_add()**

```
void cvector_add (
    cvector * p_cvector,
    value_t value )
```

Adds the specified element at the end of the cvector.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value to push at the end of the cvector

Definition at line 338 of file cvector.h.

**4.1.3.3 cvector\_addi()**

```
void cvector_addi (
    cvector * p_cvector,
    value_t value,
    index_t index )
```

Adds the specified element a the position index in the cvector, and shift following elements to the right.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value to push a the position index in the cvector
<i>index</i>	the index where the specified value will be inserted

Definition at line 355 of file cvector.h.

**4.1.3.4 cvector\_appendto()**

```
void cvector_appendto (
    cvector * p_cvector,
    cvector * p_add )
```

Appends element of the cvector pointed by `p_add` at the end of the cvector pointed by `p_cvector`.

#### Parameters

<code>p_cvector</code>	a pointer to the cvector where elements will be appended
<code>p_add</code>	a pointer to the cvector containing elements to copy

Definition at line 586 of file `cvector.h`.

#### 4.1.3.5 `cvector_clear()`

```
void cvector_clear (
    cvector * p_cvector )
```

Removes all elements of the cvector without changing its space (that is to say without calling `cvector_readjust`).

#### Parameters

<code>p_cvector</code>	a pointer to the cvector
------------------------	--------------------------

Definition at line 471 of file `cvector.h`.

#### 4.1.3.6 `cvector_concat()`

```
cvector* cvector_concat (
    cvector * p_cvector_1,
    cvector * p_cvector_2 )
```

Returns a new cvector which is the concatenation of the two specified cectors

#### Parameters

<code>p_cvector↵ _1</code>	a pointer to the first cvector to concatenate
<code>p_cvector↵ _2</code>	a pointer to the first cvector to concatenate

#### Returns

a pointer to the resulting cvector

Definition at line 607 of file `cvector.h`.

#### 4.1.3.7 `cvector_equal()`

```
bool cvector_equal (
    cvector * p_cvector_1,
    cvector * p_cvector_2 )
```

Returns true iff both specified cvecs are equal.

##### Parameters

<i>p_cvector_1</i>	a pointer to the first cvector to test
<i>p_cvector_2</i>	a pointer to the second cvector to test

##### Returns

true if both specified cvecs are equal, false otherwise

Definition at line 664 of file cvector.h.

#### 4.1.3.8 `cvector_equal_func()`

```
bool cvector_equal_func (
    cvector * p_cvector_1,
    cvector * p_cvector_2,
    bool (*) (value_t, value_t) equal_value )
```

Returns true iff both specified cvecs are equal according to the specified test function for values.

##### Parameters

<i>p_cvector_1</i>	a pointer to the first cvector to test
<i>p_cvector_2</i>	a pointer to the second cvector to test
<i>equal_value</i>	the test function for values. Its signature must be bool equal_value(value_t value_1, value_t value_2)

##### Returns

true if both specified cvecs are equal according to the test function, false otherwise

Definition at line 687 of file cvector.h.

#### 4.1.3.9 cvector\_free()

```
void cvector_free (
    cvector * p_cvector )
```

Frees the specified cvector.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector to free
------------------	----------------------------------

Definition at line 304 of file cvector.h.

#### 4.1.3.10 cvector\_free\_func()

```
void cvector_free_func (
    cvector * p_vector,
    void(*) (value_t) free_value )
```

Applies the specified free function of each value of the cvector, and then frees it too.

##### Parameters

<i>p_vector</i>	a pointer to the cvector to free
<i>free_value</i>	the function to free each value of the cvector

Definition at line 315 of file cvector.h.

#### 4.1.3.11 cvector\_get()

```
value_t cvector_get (
    cvector * p_cvector,
    index_t index )
```

Returns the value at the specified index in the cvector. Prints an error message and returns DEFAULT\_VALUE if the specified index is invalid.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>index</i>	the index of the value to get

##### Returns

the desired value if the index is correct, DEFAULT\_VALUE otherwise

Definition at line 482 of file cvector.h.

#### 4.1.3.12 cvector\_hash()

```
hash_t cvector_hash (
    cvector * p_cvector,
    hash_t(*) (value_t) hash_value )
```

Returns the hash of the specified cvector, using djb2 algorithm by Dan Bernstein, according to the specified hash function for values of the cvector.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector to hash
<i>hash_value</i>	hash function for values of the cvector. Signature of the hash value function must be hash_t hash_value(value_t value)

##### Returns

the computed hash of the specified cvector

Definition at line 649 of file cvector.h.

#### 4.1.3.13 cvector\_indexof()

```
index_t cvector_indexof (
    cvector * p_cvector,
    value_t value )
```

Returns the first index where the specified value is found in the cvector. If the value is not found, returns NOT\_FOUND\_INDEX value.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value to found

##### Returns

the first index where the specified value was found, or NOT\_FOUND\_INDEX if it was not found

Definition at line 791 of file cvector.h.

## 4.1.3.14 cvector\_indexof\_func()

```
index_t cvector_indexof_func (
    cvector * p_cvector,
    value_t value,
    bool(*) (value_t, value_t) equal_value )
```

Returns the first index where the specified value is found, according to the specified test function. If the value is not found, returns NOT\_FOUND\_INDEX value.

## Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value to found
<i>equal_value</i>	the test function to check equality between values. Its signature must be bool equal_value(value_t value_1, value_t value_2)

## Returns

the first index where the specified value was found, or NOT\_FOUND\_INDEX if it was not found

Definition at line 813 of file cvector.h.

## 4.1.3.15 cvector\_new()

```
cvector* cvector_new ( )
```

Creates a new cvector which can hold at the beginning at least DEFAULT\_INIT\_SPACE elements.

## Returns

a pointer to the new cvector

Definition at line 221 of file cvector.h.

## 4.1.3.16 cvector\_new\_copy()

```
cvector* cvector_new_copy (
    cvector * p_original )
```

Creates a new cvector which is a copy of the specified one.

## Parameters

<i>p_original</i>	a pointer to the cvector to copy
-------------------	----------------------------------

**Returns**

a pointer to the new (clone) cvector

Definition at line 256 of file cvector.h.

**4.1.3.17 cvector\_new\_copy\_space()**

```
cvector* cvector_new_copy_space (
    cvector * p_original,
    index_t space )
```

Creates a new cvector which is a copy of the specified one and which can hold at least space elements.

**Parameters**

<i>p_original</i>	a pointer to the cvector to copy
<i>space</i>	desired space for the new (clone) cvector. space must be greater or equal than the size of the original cvector

**Returns**

a pointer to the new (clone) cvector

Definition at line 276 of file cvector.h.

**4.1.3.18 cvector\_new\_space()**

```
cvector* cvector_new_space (
    index_t space )
```

Creates a new cvector which can hold at the beginning at least space elements.

**Parameters**

<i>space</i>	desired space for the new cvector
--------------	-----------------------------------

**Returns**

a pointer to the new cvector

Definition at line 236 of file cvector.h.

#### 4.1.3.19 cvector\_readjust()

```
void cvector_readjust (
    cvector * p_cvector )
```

Readjusts space of the specified cvector if needed, according to SHRINK\_THRESHOLD and EXTEND\_THRESHOLD.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
------------------	--------------------------

Definition at line 951 of file cvector.h.

#### 4.1.3.20 cvector\_remove()

```
value_t cvector_remove (
    cvector * p_cvector )
```

Removes the last element of the cvector and returns it. If the cvector is empty, prints an error and returns DEFAULT\_VALUE.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
------------------	--------------------------

##### Returns

The last value of the cvector if it is not empty, DEFAULT\_VALUE otherwise

Definition at line 401 of file cvector.h.

#### 4.1.3.21 cvector\_removei()

```
value_t cvector_removei (
    cvector * p_cvector,
    index_t index )
```

Removes the element located at the specified index, and returns it. If the cvector is empty or if the index is incorrect, prints an error and returns DEFAULT\_VALUE.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>index</i>	the index where the element will be removed

**Returns**

the removed element or DEFAULT\_VALUE if an error occurs

Definition at line 422 of file cvector.h.

**4.1.3.22 cvector\_replace()**

```
bool cvector_replace (
    cvector * p_cvector,
    value_t original,
    value_t replacement )
```

Replace specified elements in the cvector and returns true if at least one change was made.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>original</i>	original value to replace
<i>replacement</i>	replacement value for original

**Returns**

true if at least one replacement was made, false otherwise

Definition at line 727 of file cvector.h.

**4.1.3.23 cvector\_replace\_func()**

```
bool cvector_replace_func (
    cvector * p_cvector,
    value_t original,
    value_t replacement,
    bool(*) (value_t, value_t) equal_value )
```

Replace specified elements in the cvector and returns true if at least one change was made. Test between elements of the cvector and original are made with the specified function.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>original</i>	original value to replace
<i>replacement</i>	replacement value for original
<i>equal_value</i>	test function used to compare cvector elements and original. Its signature must be bool equal_value(value_t value_1, value_t value_2)

**Returns**

true if at least one replacement was made, false otherwise

Definition at line 751 of file cvector.h.

**4.1.3.24 cvector\_reversed()**

```
cvector* cvector_reversed (  
    cvector * p_cvector )
```

Returns a cvector which contains the same elements as the specified one, but in a reversed order.

**Parameters**

<i>p_cvector</i>	a pointer to the original cvector
------------------	-----------------------------------

**Returns**

the resulting cvector, containing elements of the specified cvector in a reverse order

Definition at line 627 of file cvector.h.

**4.1.3.25 cvector\_safeget()**

```
value_t cvector_safeget (  
    cvector * p_cvector,  
    index_t index )
```

Returns the value at the specified index in the cvector. Only prints a warning and returns DEFAULT\_VALUE if the specified index is invalid.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>index</i>	the index of the value to get

**Returns**

the desired value if the index is correct, DEFAULT\_VALUE otherwise

Definition at line 506 of file cvector.h.

#### 4.1.3.26 `cvector_safeset()`

```
void cvector_safeset (
    cvector * p_cvector,
    value_t value,
    index_t index )
```

Sets the value of the element located at the specified position. Only raises warning if the index is invalid, or extends the cvector to be able to set the value at the specified index.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value which will be inserted at the index position
<i>index</i>	the index where the value will be set

Definition at line 554 of file cvector.h.

#### 4.1.3.27 `cvector_set()`

```
void cvector_set (
    cvector * p_cvector,
    value_t value,
    index_t index )
```

Sets the value of the element located at the specified index. Raises error if the specified index is invalid.

##### Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>value</i>	the value which will be placed at the index position
<i>index</i>	the index where the value will be set

Definition at line 530 of file cvector.h.

#### 4.1.3.28 `cvector_slice()`

```
cvector* cvector_slice (
    cvector * p_cvector,
    index_t from,
    index_t to,
    index_t step )
```

Returns the slice `[from:to[` of the specified cvector. Prints an error and return NULL if indexes are incorrect.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>from</i>	index of the begin of the slice, included
<i>to</i>	index of the end of the slice, excluded
<i>step</i>	step of the slice

**Returns**

the corresponding (cvector) slice

Definition at line 861 of file cvector.h.

**4.1.3.29 cvector\_slicetoarray()**

```
value_t* cvector_slicetoarray (
    cvector * p_cvector,
    index_t from,
    index_t to,
    index_t step )
```

Returns the slice `[from:to[` of the specified cvector as a c-style array. Prints an error and return NULL if indexes are incorrect.

**Parameters**

<i>p_cvector</i>	a pointer to the cvector
<i>from</i>	index of the begin of the slice, included
<i>to</i>	index of the end of the slice, excluded
<i>step</i>	step of the slice

**Returns**

the corresponding (c-style array) slice

Definition at line 909 of file cvector.h.

**4.1.3.30 cvector\_sort()**

```
void cvector_sort (
    cvector * p_cvector,
    int (*)(const void *, const void *) comp_value )
```

Sorts the elements in the cvector according to the specified comparison function.

## Parameters

<i>p_cvector</i>	a pointer to the cvector
<i>comp_value</i>	a comparison function which must have the signature <code>int comp_value(const void *p_a, const void *p_b)</code> and which must <ul style="list-style-type: none"> <li>• return -1 if element a should be placed before element b</li> <li>• return 0 if element a and b could be placed at the same position</li> <li>• return 1 if element a should be placed after element b</li> </ul>

Definition at line 776 of file `cvector.h`.

4.1.3.31 `cvector_toarray()`

```
value_t* cvector_toarray (
    cvector * p_cvector )
```

Returns a pointer to a c-style array holding the same elements as the specified cvector.

## Parameters

<i>p_cvector</i>	a pointer to the cvector
------------------	--------------------------

## Returns

a c-style malloc-ed array holding the same elements as the specified cvector, which must be freed after use

Definition at line 709 of file `cvector.h`.

4.1.3.32 `default_print_debug()`

```
void default_print_debug (
    int level,
    const char * message )
```

Default `print_debug` function. Prints the specified message iif `DEBUG_LEVEL` is smaller than the specified level for the message.

## Parameters

<i>level</i>	the level for the specified debug message
<i>message</i>	the debug message to print

Definition at line 210 of file `cvector.h`.
